|  |  | Junk Modelling | Constructing a Windmill | Pussy Cat's Chair | Constructing a Roman Villa | Pavilions - Viking Longhouses | Bridges | Playgrounds |
| Skills | Design | - I can make verbal plans and material choices. <br> - I can develop a junk model. <br> - I can design a junk model boat. <br> - I can use knowledge from exploration to inform my design. | - I can understand the importance of a clear design criteria including individual preferences and requirements in a design. | - I can generate and communicating ideas using sketching and modelling | - I can design a structure with key features to appeal to a specific person/purpose. <br> - I can draw and label a structure design using 2 D shapes, labelling the 3D shapes that will create the features and include materials needed and colours. <br> - I can design and/or decorate a structure on CAD software. | - I can design a stable structure that is aesthetically pleasing and select materials to create a desired effect. <br> - I can build frame structures designed to support weight. | - I can design a stable structure that is able to support weight. <br> - I can create a frame structure with a focus on triangulation. | - I can design a playground featuring a variety of different structures, considering how the structures will be used, considering effective and ineffective designs. |
|  | Make | - I can improve my fine motor/scissor skills with a variety of materials. <br> - I can join materials in a variety of ways (temporary and permanent). <br> - I can join different materials together. <br> - I can describe my junk model, and how I intend to put it together. <br> - I can make a boat that floats and is waterproof, considering material choices. | - I can make stable structures from card, tape and glue. <br> - I can make functioning turbines and axles which are assembled into a main supporting structure. <br> - I can understand how to turn 2 D nets into 3D structures. <br> - I can follow instructions to cut and assemble the supporting structure. | - I can make a structure according to design criteria. <br> - I can build a strong and stiff structure by folding paper <br> - I can create joints and structures from paper/card and tape. | - I can construct a range of 3D geometric shapes using nets. <br> - I can make facades from a range of recycled materials. <br> - I can create special features for individual designs. | - I can select appropriate materials to build a strong structure and cladding. <br> - I can create a design in accordance with a plan. <br> - I can create a range of different shaped frame structures. <br> - I can make a variety of free-standing frame structures of different shapes and sizes. <br> - I can reinforce corners to strengthen a structure. <br> - I can understand how to create different textural effects with materials. | - I can independently measure and mark wood accurately. <br> - I can select appropriate tools and equipment for particular tasks. <br> - I can use the correct techniques to saws safely. <br> - I can make a range of different shaped beam bridges. <br> - I can build a wooden bridge structure. <br> - I can explain why selecting appropriate materials is an important part of the design process. <br> - I can understand basic wood functional properties. <br> - I can use triangles to create truss bridges that span a given distance and support a load. <br> - I can identify where a structure needs reinforcement and using card corners for support. | - I can measure, marking and cutting wood to create a range of structures. <br> - I can build a range of play apparatus structures drawing upon new and prior knowledge of structures. <br> - I can use a range of materials to reinforce and add decoration to structures. |

| Evaluate | I can give a verbal evaluation of my own and others' junk models with adult support. <br> - I can check to see if their model matches my plan. <br> - I can consider what I would do differently if I was to do it again. <br> - I can describe my favourite and least favourite part of my model. <br> - I can make predictions about, and evaluate different materials to see if they are waterproof. <br> - I can make predictions about, and evaluate existing boats to see which floats best. <br> - I can test my design and reflect on what could have been done differently. <br> - I can investigate how the shapes and structure of a boat affect the way it moves | N/A | - I can test the strength of my own structure. <br> - I can identify the weakest part of a structure. <br> - I can evaluate the strength, stiffness and stability of own structure | - I can evaluate my own work and the work of others based on the aesthetic of the finished product and in comparison, to the original design. <br> - I can suggest points for modification of the individual designs. | - I can evaluate structures made by the class. <br> - I can describe what characteristics of a design and construction made it the most effective. <br> - I can consider effective and ineffective designs. | - I can adapt and improve my own structure by identifying points of weakness and reinforcing them as necessary. <br> - I can suggest points for improvements for my own structure and those designed by others. | - I can improve a design plan based on peer evaluation. <br> - I can test and adapting a design to improve it as it is developed. <br> - I can identify what makes a successful structure. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Knowledge | - I know there are a range of different materials that can be used to make a model and that they are all slightly different. <br> - I can make simple suggestions to fix my junk model. <br> - I know that 'waterproof' materials are those which do not absorb water. <br> - I know that some objects float and others sink. <br> - I know the different parts of a boat. | - I understand that the shape of materials can be changed to improve the strength and stiffness of structures. <br> - I understand that cylinders are a strong type of structure. <br> - I understand that axles are used to make parts turn in a circle. <br> - I am beginning to understand that different structures are used for different purposes. <br> - I know that a structure is something that has been made and put together. <br> - I know that a client is the person I am designing for. <br> - I know that design criteria are a list of points to ensure the product meets the client's needs and wants. | - I know that materials can be manipulated to improve strength and stiffness. <br> - I know that a structure is something which has been formed or made from parts. <br> - I know that a 'stable' structure is one which is firmly fixed and unlikely to change or move. <br> - I know that a 'strong' structure is one which does not break easily. <br> - I know that a 'stiff' structure or material is one which does not bend easily. | - I understand the importance of strength and stiffness in structures. <br> - I understand that wide and flat based objects are more stable. <br> - I know that a paper net is a flat 2D shape that can become a 3D shape once assembled. <br> - I know that a design specification is a list of success criteria for a product. | - I understand what a frame structure is. <br> - I know that a 'freestanding' structure is one which can stand on its own. <br> - know that cladding can be applied to structures for different effects. <br> - I know that aesthetics is how a product looks. <br> - I know that a product's function means its purpose. <br> I understand that the target audience means the person or group of people a product is designed for. | - I understand some different ways to reinforce structures. <br> - I understand how triangles can be used to reinforce bridges. <br> - I know that properties are words that describe the form and function of materials. <br> - I understand why material selection is important based on properties. <br> - I understand the material (functional and aesthetic) properties of wood. <br> - I understand the difference between arch, beam, truss and suspension bridges. <br> - I understand how to carry and use a saw safely. | - I know that structures can be strengthened by manipulating materials and shapes. <br> - I know what a 'footprint plan' is. <br> - I know that in the real world, design, can impact users in positive and negative ways. <br> - I know that a prototype is a cheap model to test a design idea. |
